Accessories

अध्याय सामग्री

Definition of accessories

In Windows, Accessories are small utility programs that come pre installed to perform basic tasks and support everyday computer use.

- They include tools like Notepad, WordPad, Paint, Calculator, Snipping Tool, and Command Prompt.
- Accessories are found in the Start Menu → All Programs → Accessories (in older versions like Windows 7/8).
- They help with simple text editing, calculations, drawing, and system utilities.
- These programs are lightweight, easy to use, and designed for quick tasks rather than advanced work.

Think of Accessories as the "basic toolkit" of Windows, providing essential functions without needing extra software.

MS Paint

- A simple graphics program used for drawing and editing pictures.
- Provides tools like brush, pencil, shapes, and colors.
- Allows saving images in formats like JPEG, PNG, BMP.
- Useful for basic image editing and creating diagrams.
- Easy to use for beginners.

Notepad

- A basic text editor included in Windows.
- Used for writing plain text without formatting.
- Helpful for editing configuration files or quick notes.
- Supports saving files with .txt extension.
- Lightweight and fast.

WordPad

- A simple word processor with more features than Notepad.
- Supports formatted text (fonts, colors, alignment).
- Allows inserting images and basic document editing.
- Saves files in formats like .rtf and .docx.
- Suitable for small reports or letters.

ARUN COMPUTER

Windows Media Player

- Built in application for playing audio and video files.
- Supports playlists and libraries for organizing media.
- Can rip CDs and burn discs.
- Provides visualization effects during music playback.
- User friendly interface for multimedia.

Calculator

- A utility for performing arithmetic and scientific calculations.
- Modes include Standard, Scientific, Programmer, and Statistics.
- Useful for quick math operations.
- Provides memory functions for storing values.
- Handy for both students and professionals.

Games

- Windows includes simple built in games (like Solitaire, Minesweeper).
- Designed for entertainment and relaxation.
- Easy to learn and play.
- Often used to demonstrate basic computer interaction.
- Available in different versions of Windows.

Math Input Panel

- A tool for entering mathematical expressions using handwriting.
- Recognizes symbols, equations, and converts them to digital text.
- Useful for inserting math into documents or applications.
- Supports integration with programs like Word.
- Helpful for students and teachers working with equations.

Setting Languages (Control Panel)

- Go to Control Panel → Clock, Language, and Region → Language.
- Click Add a language to install new ones.
- You can set the default display language and keyboard input method.
- Useful for multilingual users and regional settings.

ARUN COMPUTER

Adding Fonts

- Open Control Panel → Appearance and Personalization → Fonts.
- Click Install New Font or drag font files into the Fonts window.
- Once installed, fonts are available in applications like Word or Paint.
- Supports customization of documents and designs.

Disk Cleanup

- A utility that removes temporary files, cache, and unnecessary system files.
- Access via Control Panel → Administrative Tools → Disk Cleanup.
- Helps free up disk space and improve performance.
- Safe to use regularly for maintenance.

Disk Defragmenter

- Rearranges fragmented data on the hard drive for faster access.
- Found in Control Panel → Administrative Tools → Defragment and Optimize Drives.
- Improves system speed and efficiency.
- Mostly useful for HDDs (not needed for SSDs).

 Quick memory tip:

- Languages/Fonts = personalization
- Disk Cleanup/Defragmenter = maintenance

Updates and Virus Protection:

Using Updates

- Windows provides system updates through Windows Update.
- Updates fix bugs, improve performance, and add new features.
- Security patches protect against vulnerabilities.
- Regular updating keeps the computer stable and safe.

Protecting Against Viruses

- Install and update antivirus software to detect and remove threats.
- Keep the operating system and applications updated.
- Avoid downloading files from unknown sources.
- Use firewalls and safe browsing practices.

ARUN COMPUTER

- Regular scans help maintain system security.

 Quick tip: Updates = prevention, Antivirus = protection.
